

**SARDAR PATEL UNIVERSITY
VALLABH VIDYANAGAR**

**Programme: MSC (CBCS)
Syllabus with effective from: JUNE-2017**

**BIOTECHNOLOGY
Semester II**

PS02CBIT21: Bioprocess and Biochemical Engineering

Unit I

Introduction to bioprocess technology

Isolation, primary and secondary screening, preservation, maintenance and improvement of industrially important organisms.

Raw materials for fermentation processes

Medium optimization

Unit II

Bioreactor design: Laboratory, pilot and large scale reactors. mechanical, pneumatic and hydrodynamic systems. Plug flow reactors, Immobilization and immobilized enzyme reactors.

Sterilization of media and air.

Scale up and Scale down and containment

Mass transfer of oxygen: Agitation and aeration, Determination of K_La , factors affecting K_La , fluid rheology. Inoculum development, aseptic inoculation and sampling.

Unit III

Bioprocess kinetics: Kinetics of growth and substrate utilization in batch, fed batch and continuous systems.

Control of process parameters: Instrumentation for monitoring bioreactor and fermentation processes, Sensors, Controllers, fermentation control systems and architecture, Incubation and sequence control, advanced control.

Unit IV

Downstream processing:

Bioseparation: filtration, centrifugation, sedimentation, flocculation, cell disruption, liquid liquid extraction. purification by chromatographic techniques, reverse osmosis and ultrafiltration, drying, crystallization, storage and packaging.

Fermentation Economics

PS02CBIT22: Microbial Genetics

Unit I: Mutation, DNA damage and Repair

Spontaneous mutations (Random v/s Adaptive nature of mutation; Mutation rate and its determination, Types of DNA damage and their consequences (spontaneous and chemical induced deamination, radiation induced DNA damage, loss of nitrogen bases, alkylation, intra and inter strand cross linking) , DNA repair pathways (Mis-match repair in prokaryotes and eukaryotes, Nucleotide excision repair in prokaryotes and in eukaryotes, base excision repair, recombinational repair, SOS pathway, specific repair of oxidative DNA damage, repair of pyrimidine dimers, repair of alkylation induced damage and adaptive response and other specific repair mechanisms).

Unit II:

Plasmid Biology (Types of plasmids, compatibility, regulation of plasmid copy number and plasmid segregation)

Phage genetics (T-series, complementation and Fine structure analysis, biology of lambda phages)

Recombination (Types, Models of homologous recombination, Molecular mechanism of homologous, Homologous recombination in eukaryotes, mating type switching, Site specific recombination and its biological significance)

Fungal Genetics (Tetrad analysis and Mitotic recombination)

Unit III: Genetic exchange in prokaryotes

Transformation (Natural transformation in *Bacillus subtilis*, *Streptococcus pneumonia* and *Haemophilus influenza*). Transformation by inducing artificial competence, Gene linkage and mapping by transformation.

Transduction (Generalized transduction in P22, P1, T4 and Mu bacteriophages, homologous recombination with recipient's chromosome, measuring transduction (co-transduction of markers, marker effects, abortive transduction, transduction of plasmids). Applications of generalized transduction, Specialized transduction and its applications.

Conjugation (F-factor mediated Conjugation in *E. coli*, Hfr conjugation and chromosomal transfer, F-prime conjugation and merodiploids, Conjugation of fertility inhibited F-like plasmids, Non conjugative mobilizable plasmids, chromosomal mobilization of non-F plasmids, Plasmid based conjugation in other bacteria (*Salmonella*, *Pseudomonas*, *Streptomyces* and *streptococcus*, Interrupted mating and conjugational mapping)

Unit IV

Agrobacterium genetics: Ti plasmid, Interkingdom gene transfer (Key early experiments, vir regulon, protein secretion apparatus, conjugation model of T-DNA transfer, Integration products)

Restriction modification systems: Types of RM systems, Role of RM systems, salient features and insights into evolution of diverse types of Restriction endonucleases and Methyl transferases, Regulation of RM systems.

Transposable elements: Types of bacterial transposable elements; Structure, genetic organization and mechanism of transposition of Tn5, Tn3, phage Mu, Tn7, IS911, Integrons, Retrotransposons, conjugative and mobilizable transposons, Assays of transposition.

PS02CBIT23: Fundamentals of Immunology

Unit I

Introduction to immune system: mechanisms of barrier to entry of microbes / pathogens;
Cells and organs of the immune system involved in innate and adaptive immunity: cells of the immune system, primary and secondary lymphoid organs, Hematopoiesis and its regulation

Innate immunity: receptors of the innate immunity (TLR and sensing of PAMPs, CLR, RLR and CLR); Inflammatory responses

Antigens: antigenicity, and immunogenicity. B and T cell epitopes

Unit II

Antibody: Structure of immunoglobulin; classes of immunoglobulins, Signal transduction pathways emanating from the BCR,

The Organization and Expression of Lymphocyte Receptor Genes: Hozumi and Tonegawa's Experiment, Multigene organization of Ig Gene, Mechanism of VDJ recombination, B cell receptor expression, allelic exclusion, B cell isotype switching and somatic hypermutation; expression of membrane bound and soluble immunoglobulin; T cell receptor genes and expression

Complement system: Overview of classical, alternative and lectin complement pathways, functions of complement, regulation of complement, complement deficiencies, microbial complement evasion strategies

Unit III

The Major Histocompatibility Complex and Antigen Presentation: The structure and function of MHC molecules, general organization and inheritance of MHC, self – MHC restriction, endogenous and exogenous pathway of antigen processing and presentation; cross presentation of exogenous antigen, presentation of non peptide antigens

Cytokines: properties, receptors, associated diseases, therapeutic applications, cytokine signaling pathways: JAK-STAT and FAS-FASL signaling pathways

Unit IV

Basics of Antigen-antibody interactions: Agglutination, precipitation, RIA and ELISA

Cell and antibody mediated effector response: Antibody mediated effector response (Neutralization, opsonization/ phagocytosis, complement fixation, ADCC); Cell mediated effector response (Generation of effector CTL's, Granzyme and Perforin Mediated Cytolysis, Fas-FasL Mediated Cytolysis, NK cell mediated cytotoxicity)

Immunity to infection: Immunity to viruses, Immunity to bacteria and fungi, Immunity to parasites (protozoa and worms).

PS02EBIT21: Biostatistics

Unit - I

Definition of Biostatistics

Data Collection:

Types of Biological Data:

Qualitative (Categorical) Data: Nominal and Ordinal Data

Quantitative (Numerical) Data: Discrete and Continuous Data

Methods of Collecting Data:

Survey Method: Concept of a statistical population and sample from a population; Methods of drawing sample from the population, Simple Random Sampling (SRS), Stratified Random Sampling, Cluster Sampling; Experimental Method

Presentation:

Construction of frequency distribution (Simple or Discrete and Grouped): Rules for constructing Grouped frequency distribution

Diagrammatic Presentation: Bar Diagram (Chart), Simple, Sub – divided (Component), Percentage, Multiple, Pie Chart

Graphical Presentation: Line Graph, Histogram (For uniform class width only), Frequency Polygon, Frequency Curve, Ogives or Cumulative Frequency Curves

Descriptive Statistics:

Measures of Central Tendency (Averages): Mean or Arithmetic Mean, Median, Mode, Partition Values (For Raw and Grouped Data), Quartiles, Deciles, Percentile, Partition values using graphs (Ogives).

Measures of Dispersion (Variation): Range, Quartile Deviation (Q.D), Inter Quartile Range (IQR), Standard Deviation (SD) and Variance, Coefficient of Variation (C.V), Box – and – Whisker Plot.

Measures of Skewness and Kurtosis: Karl – Pearson's Coeff. of Skewness, Bowley's Coeff. Of Skewness, Kurtosis (Definition Only).

Unit - II

Probability and Probability Distributions:

Elements of Probability theory: Concept, Classical definition of Probability, Laws of Probabilities (Statements Only), Conditional Probability, Examples

Probability Distributions: Binomial Distribution. Definition, Conditions for applicability of Binomial Distribution, Examples applicable in the field of Biosciences; **Normal Distribution**, Definition (Normal and Standard Normal Distribution), Properties of Normal Distribution, Examples applicable in the field of Biosciences

Unit - III

Correlation and Regression Analysis:

Correlation: Meaning, Types of Correlation, Positive, Negative, Non – Sense or Spurious, Methods of studying correlation, Scatter Plot (diagram) method, Karl-Pearson's Correlation Coefficient (Product Moment) Method; Properties of Correlation Coefficient

Coefficient of determination and its meaning: Spearman's Rank Correlation Coefficient; Properties of Rank Correlation Coefficient

Regression: Meaning, Properties of Regression Coefficients, Applications in the field of Biosciences

Testing Of Hypothesis: Contingency tables, Goodness of Fit

Unit - IV

Large Sample Test: Z - test for (Single) population proportion; Z - test for difference between two population proportions; Z - test for (Single) population mean; Z - test for difference between two population means

Small Sample Test: t – test for (Single) Population Mean, t – test for difference between two population means (Unpaired t-test), t – test for difference between two population means (Paired t-test)

Analysis Of Variance (ANOVA) : One – Way Classification , Two – Way Classification

PS02EBIT22: Medical Microbiology

Unit-I Basics in Medical Microbiology

- Sources of infection, Modes of transmission, Factors predisposing to microbial pathogenicity, Types of infectious diseases,
- Prevention and Control of Hospital acquired infections. Immunoprophylaxis: Types of vaccines and schedule of vaccination.
- Recent advances in diagnostic microbiology: Automation, Nucleic acid based detection methods.

Unit-II Bacteriology

Morphology, Cultural Characteristics, Antigenic structures, Pathogenesis, Laboratory Diagnosis of following bacteria: *Staphylococcus*, *Streptococcus* including *Pneumococcus*, *Bacillus*, *Corynebacterium*, *Clostridium*, *Mycobacteria*, *Vibrios*, *E. coli*, *Salmonella*, *Shigella*, *Spirochaetes*, *Neisseria*,

Unit-III Virology

- The Nature and classification of viruses, Morphology: virus structure and Virus replication.
- General properties, diseases caused, lab diagnosis and prevention of
 - Pox, Herpes (HSV), Hepatitis (HAV & HAB), Picorna (Polio virus), Orthomyxo (Influenza), Paramyxo (Mumps and Measles), Rabdo (Rabies), Ebola, Zika and HIV virus.
- Viral vaccines and antiviral agents.

Unit-IV Parasitology & Mycology

Parasitology: Laboratory techniques in parasitology.

Morphology, life cycle, laboratory diagnosis of following parasites

Parasites: Entamoeba, Giardia, Leishmania, Plasmodium,

Helminths: Taenia, Ascaris, Wuchereria bancrofti, Schistosomes

Mycology: Morphology, diseases caused and lab diagnosis of:-

- Opportunistic fungi - *Cryptococcus*, *Candida*, *Aspergillus*.
- Fungi causing Cutaneous mycoses- *Dermatophytes*
- Subcutaneous mycoses - *Mycetoma*,
- Systemic mycoses-*Histoplasma*

10. Biswas SB and Biswas A An Introduction to Viruses.

PS02EBIT23: Microtechniques

Unit I

Light microscopy

Properties of lenses, Optical corrections, Properties and types of objectives, Oculars and Illumination.

Light microscopes: Bright field, dark field, fluorescence, phase contrast, polarizing, differential interference contrast.

Micrometry and photomicrography

Unit II

Basic components of electron microscopes. Thermionic and field emission guns. Types of electron microscopes: TEM, SEM, STEM, ESEM and HVEM

Unit III

Maceration, squash and clearing techniques. Sample preparation for light microscopy. Classification of fixatives, formulas', (Plant and animal samples).

Sample preparation for light microscopy: Fixation, dehydration and infiltration procedures. Embedding media for light microscopy. Stains and staining procedures- negative and positive staining procedures. Microtomes: Rotary, sliding, cryostat. Histochemical localization of metabolites for light microscopy: Starch, proteins, lipids, total carbohydrates, lignins, polyphenols, nucleic acid, histones, cutin, suberin and waxes. Localization of enzymes: Peroxidase, acid phosphatase and succinic dehydrogenase.

Unit IV

Freeze etching and freeze fracturing.

Sample preparation for Electron microscope: Fixatives, double fixation, dehydration and infiltration procedures, embedding media for electron microscopy. Fixation and embedding of particulate samples like bacteria, virus etc. ultra-microtome and freezing ultramicrotome-semi thin sectioning, ultrathin sectioning, grids, formavar coating, Staining for electron microscopy.

Ultrastructural cytochemistry: Tannin, protein, cell wall polysaccharide, lignin and membrane.

Enzymes: Peroxidase and phosphatase.

Immunocytochemistry.

PS02EBIT24: Medical Biochemistry

Unit 1

Principles of Diagnostic Enzymology: Serum Enzyme in heart disease, Liver disease, GI tract disease, muscle disease, bone diseases and in Malignancy, clinical importance of Isoenzyme (creatinine kinase and lactate dehydrogenase, Alkaline phosphatase)

Disorders of mineral metabolism: Hypercalcaemia, hypocalcaemia, normocalcaemia, hypophosphataemia and hyperphosphataemia.

Vitamin : Dietary sources, biochemical functions and specific deficiency diseases

Unit 2

Organ function tests: Liver function tests - Bile pigment metabolism - Jaundice and its type;

Blood coagulation disorder- Haemoglobinopathies, sickle cell anaemia.

Functions of Kidney, Urine formation and renal function tests disease of kidney - Renal Calculi, Theory of formation and analysis, chronic renal failure;

Gastric Analysis - Composition of gastric juice, concepts of free and bound acid, Fractional Test Meal;

Pancreatic function tests; Thyroid function tests; Cardiac function test

Unit 3

Lifestyle Diseases:

Cardiovascular Problems- Systemic Hypertension and Arteriosclerosis, Stroke,

Neurological Disorders - Epilepsy, Sleep Disorders, Alzheimer's Disease, Parkinson Disease, Huntington's disease,

Cancer biology- Mechanism of carcinogenesis, tumor suppressor genes and oncogene, Cancer markers

Unit 4

Infectious disease:

Relation between normal microbiota and host, opportunistic microorganisms, Spread of infectious diseases, Respiratory tract infection- Tuberculosis; Gastro intestinal tract infection:

Food poisoning

Biochemistry of AIDS
