

**SARDAR PATEL UNIVERSITY**  
**Programme & Subject: M.Sc (QPM)**  
**Semester: I**  
**Syllabus with effect from: June - 2014**

<b>Paper Code: QP - 101</b>	<b>Total Credit:</b>
<b>Title Of Paper: Business Statistics and Information Systems</b>	

Unit	Description in Detail	Weightage (%)
I	Types of Data: Concepts of a statistical population and sample from a population; qualitative and quantitative data; nominal and ordinal data; cross sectional and time series data; discrete and continuous data; frequency and non- frequency data. Different types of scales - nominal, ordinal, ratio and interval. Diagrammatic and graphical representation of grouped data. Frequency distributions, cumulative frequency distributions and their graphical representation, histogram, frequency polygon and ogives.	[10]
II	Measures of central tendency: Criteria for good measures of central tendency, Arithmetic Mean, Geometric Mean and Harmonic Mean, Median and Mode for row and grouped data. Quantiles, Deciles and Percentiles for row and grouped data. Measures of Dispersion: Concept of dispersion, Absolute and relative measure of dispersion, Range, absolute mean deviation, variance, standard deviation, coefficient of variation, Quartile Deviation, Coefficient of quartile deviation.	[8]
III	Probability: Deterministic and Random Experiments. Simple and Compound Events, Sample Space. Union and Intersection of events, mutually exclusive events, Mathematical and Statistical Definition of Probability, Some important results on probability, Null and Sure Event, Independent Events. Conditional Probability, Bayes' Theorem. Probability Distribution: Bernoulli, Binomial, Geometric and Negative Binomial and Poisson distribution and their important properties. Normal and Exponential Distribution and their properties.	[10]
IV	Correlation: Concept of correlation, positive & negative correlation, Scatter Diagram, Karl Pearson's Coefficient of correlation and its properties. Coefficient of determination Regression: Concepts of error in regression, Fitting of linear regression Testing of hypotheses: Definition of null and alternative hypotheses; two type errors, level significance and p-value. One sample problem: Z, t and chi-square tests. Two sample problem: F-test, Independent sample t-test and paired t-test.	[12]

**Basic Text & Reference Books:-**
