( ) SARDAR PATEL UNIVERSITY

M. Sc. Integrated Biotechnology External Examination, Sixth Semester

Date: 03/11/2017,(Friday)

Time: 2:00 pm to 5:00 pm **PS06CIGB02: Genetic Engineering** 

Total Marks: 70

Multiple choice questions (All are compulsory). Q-1

[80]

- Transformation method of plants and animals in which plants and animals are given (1) shocks is known as
  - a) microinjection b) genome breeding c) electroporation d) genome engineering
- Any DNA molecule that has the ability to replicate in an appropriate host cell, to which (2)the desired gene are integrated for cloning, is called as
  - a) Plasmid
- b) linker
- c) vector
- The most popular and widely used engineered plasmid vector is (3)
  - a) pBR 322 b) pUC vectors c) pSC101
- d) pUC 19
- Which of the following is an RNA dependent DNA synthetase (4)
  - a) DNA polymerase I b) DNA polymerase II c) Reverse transcriptase d) all of these
- If you want a radiolabel a DNA strand using P32, which of the following is the most (5) suited enzyme for that purpose?
  - a) DNA polymerase
- b) Reverse transcriptase
- c) Polynucleotide Kinase
- d) Terminal transferase
- For cross linking of nucleic acids to nylon membranes the short and medium wave UV (6) light employed is
  - a) 254-312 nm b) 180-250 nm c) 320-410 nm
- Ti plasmids that is used as a plant vector is obtained from (7)
  - a) Agrobacterium tumefaciens
- b) Agrobacterium rhizhogenes
- c) Agrobacterium radiobactor
- d) Thermus aquaticus
- Golden rice is a genetically modified crop plant where the incorporated genes are (8) meant for biosynthesis of ----
  - a) vitamin A
- b) vitamin C
- c) vitamin B
- d) Beta-carotene
- Answer the following questions in short. (Any Seven) Q-2

[14]

- Write properties of plasmid. (1)
- Write a note on microinjection. (2)
- Write the importance of vector in cloning. (3)
- Write a note on Alkaline phosphatase and Terminal transferase enzymes. (4)
- What are the importance of salmon sperm DNA in hybridization procedure? (5)
- Write a short note on Southern blotting. (6)
- What do you means by nested deletion? (7)
- Write a note on promoter. (8)
- Write the different steps of safety in genetic engineering. (9)

O-3 (A) Discuss the importance and structure of pBR322 vector.  (B) Explain the principle and importance of electroporation method of transformation of the principle and importance of electroporation method of transformation of the principle and importance of electroporation method of transformation of the principle and importance of electroporation method of transformation of the principle and properties of Vectors and hosts for suitable transformation of the principle and indirect of the principle and indirect method in the properties of vectors and indirect methods for producing representative of the producing representative of	
OR  (B) Explain the different properties of Vectors and hosts for suitable transformation  Q-4 (A) Discuss a method of full length cDNA cloning in detail.  (B) Explain Clarke and Carbon method with example for producing representative Genomic libraries in Cloning vector.  OR  (B) Explain at least two different methods for selection of recombinant vector corn Gene of interest (GOI).  Q-5 (A) Describe various direct and indirect methods used for screening of recombinate (B) Explain the techniques involved in Northern blotting.  OR  (B) Discuss the method of subtractive hybridization in detail?  Q-6 (A) Briefly explain site directed mutagenesis  (B) Write a short note on the risk associated with genetic modified crops and food	
(B) Explain the different properties of Vectors and hosts for suitable transformation  Q-4 (A) Discuss a method of full length cDNA cloning in detail.  (B) Explain Clarke and Carbon method with example for producing representative Genomic libraries in Cloning vector.  OR  (B) Explain at least two different methods for selection of recombinant vector corn Gene of interest (GOI).  Q-5 (A) Describe various direct and indirect methods used for screening of recombinant (B) Explain the techniques involved in Northern blotting.  OR  (B) Discuss the method of subtractive hybridization in detail?  Q-6 (A) Briefly explain site directed mutagenesis  (B) Write a short note on the risk associated with genetic modified crops and food	on. [ 06 ]
Q-4 (A) Discuss a method of full length cDNA cloning in detail.  (B) Explain Clarke and Carbon method with example for producing representative Genomic libraries in Cloning vector.  OR  (B) Explain at least two different methods for selection of recombinant vector con Gene of interest (GOI).  Q-5 (A) Describe various direct and indirect methods used for screening of recombinate (B) Explain the techniques involved in Northern blotting.  OR  (B) Discuss the method of subtractive hybridization in detail?  Q-6 (A) Briefly explain site directed mutagenesis  (B) Write a short note on the risk associated with genetic modified crops and food	on. [ 06 ]
(B) Explain Clarke and Carbon method with example for producing representative Genomic libraries in Cloning vector.  OR  (B) Explain at least two different methods for selection of recombinant vector corn Gene of interest (GOI).  Q-5 (A) Describe various direct and indirect methods used for screening of recombinant (B) Explain the techniques involved in Northern blotting.  OR  (B) Discuss the method of subtractive hybridization in detail?  Q-6 (A) Briefly explain site directed mutagenesis  (B) Write a short note on the risk associated with genetic modified crops and food	
Genomic libraries in Cloning vector.  OR  (B) Explain at least two different methods for selection of recombinant vector corn Gene of interest (GOI).  Q-5 (A) Describe various direct and indirect methods used for screening of recombinate (B) Explain the techniques involved in Northern blotting.  OR  (B) Discuss the method of subtractive hybridization in detail?  Q-6 (A) Briefly explain site directed mutagenesis  (B) Write a short note on the risk associated with genetic modified crops and food	[06]
(B) Explain at least two different methods for selection of recombinant vector configence of interest (GOI).  Q-5 (A) Describe various direct and indirect methods used for screening of recombinate (B) Explain the techniques involved in Northern blotting.  OR  (B) Discuss the method of subtractive hybridization in detail?  Q-6 (A) Briefly explain site directed mutagenesis (B) Write a short note on the risk associated with genetic modified crops and food	es [ 06 ]
Gene of interest (GOI).  Q-5  (A) Describe various direct and indirect methods used for screening of recombinate (B) Explain the techniques involved in Northern blotting.  OR  (B) Discuss the method of subtractive hybridization in detail?  Q-6  (A) Briefly explain site directed mutagenesis  (B) Write a short note on the risk associated with genetic modified crops and food	•
(B) Explain the techniques involved in Northern blotting.  OR  (B) Discuss the method of subtractive hybridization in detail?  Q-6 (A) Briefly explain site directed mutagenesis  (B) Write a short note on the risk associated with genetic modified crops and food	nsisting of [06]
OR  (B) Discuss the method of subtractive hybridization in detail?  Q-6 (A) Briefly explain site directed mutagenesis  (B) Write a short note on the risk associated with genetic modified crops and food	nt clones [06]
(B) Discuss the method of subtractive hybridization in detail?  Q-6 (A) Briefly explain site directed mutagenesis  (B) Write a short note on the risk associated with genetic modified crops and food	[06]
Q-6 (A) Briefly explain site directed mutagenesis  (B) Write a short note on the risk associated with genetic modified crops and food	
(B) Write a short note on the risk associated with genetic modified crops and food	[06]
	[06]
O'R	d [06]
(B) With suitable examples explain purification of recombinant protein	[06]

#### SARDAR PATEL UNIVERSITY

M.Sc. Examination - November 2017

M. Sc. Integrated Biotechnology (IGBT) - 6th Semester Tuesday, 07th November 2017

Session: Evening

Time: 02:00 pm to 5:00 pm

Subject / Course code: - PS06CIGB03

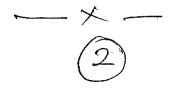

Subject / Course Title: - Industrial Microbiology

Choose the correct option	1x8=8
(i) Which one of the following	is the example of In-Line sensor?
[A] Ion specific sensor.	[B] Mass spectrophotometer
[C] Antifoam probe	[D] tachometers
	r coefficient, K <sub>L</sub> a has the unit
[A] $cm^2 h^{-1}$	[B] h <sup>-1</sup>
[C] cm <sup>3</sup> /cm <sup>2</sup>	[D] cm <sup>2</sup> /dm <sup>3</sup>
	method is not used for sterilization of media?
[A] Radiation	[B] Filtration
[C] Agitation	[D] Heat
	cum increased cell permeability to the
Glutamic acid can be achieve	
[A] ensuring biotin deficien	<del>-</del> •
[B] treatment with fatty ac	
	uring growth of glutamic acid bacteria
[D] All of the above	during growth of glutatine acid dacteria
£ 3	is inhibition the first enzyme of pathway by each
end products by a certain per	recentage independently of other end products.
[A] Co-operative [C] Concerted	[B] Cumulative
	[D] sequential
(vi) The Aist has standards for	a broad range of stainless steels that can be used in
many applications. What is	
[A] American Institute for	
[B] American Indian Stand	
[C] American Iron and Stee	
[D] American Institute of S	
(vii) The most widery used chem	nical for protoplast fusion, as fusogen, is
[A] Manitol	[B] Sorbitol
[C] Mannol	[D] Poly ethylene glycol
(VIII) Isolation & detection of mic	croorganisms, which are able to produce antibiotic,
is largely done by	technique.
[A] auxanography	[B] enrichment
[C] crowded plate	[D] sandwich
Attempt any seven of the following	ng 2x7= 14
a) Role of pH indicator dyes in	
b) What is baffle and function o	
c) Define batch and continuous	
a) Enlist characteristics of indus	strially important microorganisms.
	· · · · · · · · · · · · · · · · · · ·

	f) What are absolute filters and depth filters?	
	g) Enlist the applications of citric acid	
	h) Define the term precursors and buffers.	
	<ol> <li>Define the term Primary screening and secondary screening.</li> </ol>	
Q. 3.	(A) Discuss in detail the technique used for primary screening of Antibiotic producing organisms.	[06]
	(B) Enlist various methods of preservation of industrially important microorganisms. Explain any one method in detail.	[06]
	OR	
Q. 3.	(B) Discuss with suitable examples for the isolation of induced mutant producing improved yields of primary metabolites	[06]
Q. 4.	(A) Discuss in detail the crude carbon sources used in fermentation medium and factors affecting choice of carbon sources in fermentation medium.	[06]
	(B) Discuss in detail on Antifoam agents.	£0.61
	OR	[06]
Q. 4.	(B) Explain the design of continuous sterilization process with labelled diagram.  Write advantages of continuous sterilization over batch sterilization.	[06]
Q. 5.	(A) Explain the various functions of fermenter and describe the body construction of a fermenter with suitable diagram.	[06]
	(B) Enlist the different process variables, which requires measurement and control. Explain any one in detail.	[06]
	OR	
Q. 5.	(B) Give an account on components involved in aeration and agitation.	[06]
Q. 6.	(A) Discuss in brief on Surface, submerged and solid state fermentation.	[06]
	(B) Write a note on Solvent extraction method for product recovery with suitable example.	[06]
	OR	
Q. 6.	(B) Discuss in brief the fermentative production of amylase.	[06]

e) Explain the terms crude medium and synthetic medium

PS06CIGB04 – Biosensors and Biocrystallography

		•	Maximum Mari	cs: /0
	•	the Questions are compulsory.		
2	) Fig	ures on the right indicate marks.		
Q.1		Multiple choice questions:		(08)
	[1]	term describes the m	naximum expected error associated with a	
		measurement or a sensor.	•	
		a) resolution	c) accuracy	
		b) sensitivity	d) precision	
	[2]	Resistance and capacitance are	measured.	
		a) Chemical	c) Electrical	
		b) Thermal	d) Mechanical	
	[3]	is father of biosenso	or.	
		a) Edison	c) Verneuil	
		b) Clark	d) Albert	
	[4]	•	econd generation biosensor.	
	ניו	a) Acrydine Orange	c) Ferrocene	
		b) TCNQ	d) None of above	
	[5]	,	ge of purification is best measured by	
		· · · · · · · · · · · · · · · · · · ·	ge of purification is best incusared by	
		of an enzyme.	-> G., ' C., / '- '/	
		a) Percent recovery	c) Specific activity	
		b) Total activity	d) none of these	
	[6]	The 3 D structure of protein crystal		
		a) XRD	c) Spectroscopy	
		b) NMR	d) a and b both	
	[7]	There are types of crystal system	ns.	
		a) 7	c) 21	
•		b) 14	d) 28	
	[8]	The wavelength of X-ray is	·	
			c) 0.01 to 10nm	
		b) 10 to 100 nm	d) 0.01 to 100nm	
Q.2		Answer the following (Any Seven		(14)
•	1.	Write the parameters required for d		, ,
-	2.	State operating principle of Electro		
	3.	Give the components of biosensor.		
	4.	Write the application of biochip.		
	5.	Enlist the methods of bioreceptor is	mmobilization.	-
	6.	Differentiate between a convention	al crystal and macromolecular crystal.	

	8.	Derive Bragg's law.	
	9.	Enlist the properties of X-rays.	
Q.3	(A)	Discuss in detail about the mechanical and thermal characteristics of sensors.	(06)
	(B)	Explain electric characterization methods of sensors.  OR	(06)
	(B)	Define sensor. Write its principle and importance.	(06)
Q.4	(A) (B)	Describe the types of biosensors based on the use of different sensor device. Define Immobilization. Explain and three methods for immobilization of enzyme.	(06) (06)
	(D)	OR	
	(B)	Write a note on second generation biosensors.	(06)
Q.5	(A) (B)	What is crystallization? Explain any two technique of protein crystal growth. Enlist physical properties of organic compound and Write a note on Isomerism in detail	(06) (06)
	(B)	OR Enlist and explain the physical properties of organic compounds.	(06)
	(2)	Entire and explain the physical properties of organic compounds.	(00)
<b>Q.</b> 6	(A) (B)	Write a note on modern Coolidge tube for production of X-rays.  Discuss in detail the powder and rotating crystal methods for diffraction of X-rays.	(06) (06)
		OR	
	(B)	Give detailed note on structure determination of protein crystals by x-ray crystallography.	(06)

**TOTAL MARKS: 70** 

		/ select the correct answer f o be written in provided ans		orre corre	ect option against given question (08 Marks)
		the following is used to dis		ording	to wavelength
	a.	Source			
	b.	Monochromator			
	c.	Sample holder	•		
	d.	Nebulizer			
2.	One of	the following is most comm	nonly used source for v	visible	radiation.
	a.	Tungsten filament lamp			
	b.	Hydrogen lamp			
	c.	Deuterium lamp			
	d.	Nernst glower			
3.	Flame	photometry is also known a	s		
	a.	Atomic emission spectroso	ору		
		Flame emission spectrosco			
	c.	Both (a) and (b)			
	d.	None of these			
4.	The ve	ry near IR region ranges fro	om to		
	a.	1.2; 2.5			
	b.	2.5;25	•		
	c.	25;300	•		
	d.	25; 400			
5.	Fluore	scence spectroscopy deals w	vithpheno	menor	1.
	a.	Emission		c.	Transmission
	b.	Absorbance	•	d.	None of these
6.	In mas	s spectroscopy, the mass spe	ectrum is a plot of the .	••••••	of the ions at each m/z
	a.	Resonance frequency		c.	Relative abundance
		Emission		d.	None of these
7.	In radi	ometric titration, titration cu	irve is always		
	a.	Curved		c.	Linear
	b.	Sigmoid		d.	None of them
8.		ion radiation is producing b	y atom.		
	a.	Unstable atom		c.	Both (a) and (b)
	b.	Stable atom		d.	None of them

Q.2	Ansv a) b) c) d) e) f) g) h)	Define hypochromic and hypochromic effect State Beer's law Explain how photovoltaic cell works How turbidity and temperature affects Beer's law? Draw schematic diagram of double beam spectroscopy Enlist the various components of mass spectrometers. What is nuclear resonance Write a short note on solid scintillation counting. Write the principle of radio ligand assay technique.	14	N.
Q.3	(A)	Explain wavelength selectors and light sources used in UV visible spectrometer	6	
	(B)	Discuss factors affecting Beer's law in detail	6	
	(B)	OR Describe detectors used in UV Spectroscopy	6	
Q.4	(A)	Discuss radiation sources and monochromators used in IR spectroscopy	6	
	(B)	Write detailed note on AAS	6	
	(B)	OR Discuss the role of components of absorption spectroscopy	6	
Q.5	(A)	Give a detail account on Fluorescence spectroscopy	6	
	(B)	Discuss the various applications of mass spectroscopy in details	6	
	(B)	OR Write the principle and important applications of NMR spectroscopy in details	6	
Q.6	(A)	Explain in detail about autoradiography technique	6	
	(B)	Discuss in detail about radio ligand assay	6	
	(B)	OR Write a detail note on any one of the method used for radiation detection	6

PS06CIGB06: ANIMAL PHYSIOLOGY

Note: 1) Figures to the right indicate marks

d) thyroid gland

2) Draw diagram wherever necessary

**TOTAL MARKS: 70** 

Q.:	Tick mark / select the correct answer for the following. (Only correct option against given question number needs to be written in provided answer book) (08 Marks)
1)	Salivary amylase secreted into the oral cavity starts the digestion of
1)	a) proteins
	b) starch
	c) lipids
	d) amino acids
2)	Which of the following secrete hydrochloric acid?
,	a) Mucous
	b) Parietal
	c) Chief
	d) Serosa
3)	blood group is known as universal donor:
ŕ	a) AB
	b) A
	c) B
	d) O
4)	Haemoglobin is found in the
	a) thrombocytes
	b) leucocytes
	c) erythrocytes
	d) pinocytes
5)	Resting membrane potential of neuron is
	a) -55mV
	b) -70mV
	c) -90mV
	d) +30mV
6)	The functional unit of kidney is called:
	a) Ureters
	b) Nephron
	c) Bowman's cpsule
	d) Urinary bladder
7)	One of the following cell type secretes insulin:
	a) Alpha
	b) Beta
	c) Delta
	d) Gamma
8)	Which gland regulates the "Biological Clock" of human body?
	a) adrenal gland
	b) parathyroid glands
	c) pineal gland

Q.2	An	swer any seven from the following:	14
	<b>a</b> )	Enlist the organs of the digestive system.	14
	b)	Write the phases of swallowing.	
	c)	What is the role of vitamin K in clotting?	
	d)	Write the various types of circulatory systems.	
	e)	Sketch and label the structure of neuron.	
	f)	State two points of difference between action potential and graded potential.	
	g)	Draw a schematic representation of the internal structure of a kidney.	
	h)	List any three endocrine glands with their secretions	
	i)	Define glomerular filtration rate (GFR)?	
Q.3	(A)	Explain the structure and functions of salivary glands.	6
	(B)	Discuss the structure and functions of liver in metabolism and homeostasis.	_
		OR	6
	(B)	Describe the role of stomach in digestive system.	6
Q.4	(A)	Describe the etweetone and a second second second	
۸.,	(21)	Describe the structure and composition of blood.	6
	(B)	Explain the extrinsic and intrinsic pathways of blood clotting.	6
		OR	6
	(B)	Write a short note on chambers of heart.	6
Q.5	(A)	Classify naurons on the basis of the	
<b>~.</b>	(21)	Classify neurons on the basis of structure and function.	6
	(B)	Describe the propagation of action potential across a chemical synapse	(
		OR	6
	(B)	Enlist the different parts of brain and with detailed function.	6
0.6	(A)		
Q.0	(A)	Write an explanatory note on structure and types of nephron.	6
	(B)	Describe the location, structure and endocrine functions of pancreas.	
	• /	$\mathbf{OR}$	6
	(B)	Discuss the structure and function of filtration membrane.	6

PS06CIGGB01: Fundamentals of Immunology
1ST Nov. 2017
TIME: 2:00 to 5.00 pm
Max. Marks: 70

Notes: - 1) Figures to the right indicate marks.

2) Draw neat and labeled diagram, wherever necessary.

Q.I	Answer the following Multiple Choice Questions. All are compulsory	[08]
1.	The antigens present in blood are presented to B cells in a. Lymph nodes b. spleen c. thymus d. MALT	
2.	The following is not an example of granulocyte  a. Neutrophil b. basophil c. eosiniphil d. monocyte	
<b>3</b> .	In IgG glycosylation occurs atdomain a. C <sub>H</sub> 1 b. C <sub>H</sub> 2 c. C <sub>H</sub> 3 d.C <sub>H</sub> 4	
4.	The antibody class present in external secretion is  a. IgG b. IgA c. IgD d. IgE	
5.	MHC complex in mice is called as a. HLA b. HLB c. H-2 d. H-3	
6.	Thymic selection is exerted at following stage  a. Single positive b. single negative c. double positive d. double negative	
7.	In Radio immunoassay, the labeling is done with a. I <sup>125</sup> b. P <sup>32</sup> c. S <sup>35</sup> d. H <sup>1</sup>	
8.	Vaccine shows  a. Memory b. specificity c. memory and specificity both d. neither memory nor specificity	
Q.II	Answer the following questions. (Attempt Any Seven)	[14]
1.		- 1
2.	Differentiate between innate and adaptive immunity.	-
3.	Explain haptens.	
4.	Mention the differences in antigen recognition by B cell and T cell.	
5.	Draw a labeled diagram of antibody molecule.	
6.	Enlist differences between plasma cell and memory cell	
7.	Explain immunoprecipitation curve.	
8.	What is Coomb's test?	
9.	Give example of toxin-antitoxin reaction.
